

## Case Study – Lewis Charles

Lewis Charles: Lewis Charles, London

Total Project Value: £55,000

Date: Mar – 2006

### Project Details:

Lewis Charles approached Blakes to design and install VRF style systems for their head office in Worship Street, London. Being securities traders each floor had a high heat load factor due to the amount of monitors and computers used for trading, the system was to be able to cool or heat over the four floors, the ceiling voids in the building were very tight so slim line indoor units would have to be used.

### System Description:

Energy Efficient LG VRF 2-pipe outdoor units were chosen due to cost savings and a practical fit to the building, the outdoor units had slim line indoor cassette units connected offering a powerful indoor unit with air distributed in four directions to evenly condition the open plan office area.
